PROVISIONAL SPECIFICATION.

Improvements in Pouches for Containing Tobacco, or the like.

I, HARRY SMALLWOOD, a British subject, of 30, Girdler's Road, Brook Green, in the County of London, do hereby declare the nature of this invention to be as follows:—

My invention has for its object to provide an improved pouch for containing tobacco, or the like, the said pouch being of the kind in which an outer portion of strong material, such, for example, as leather, is lined with a material practically impervious to moisture and air; such, for instance, as india-rubber.

The pouch according to my invention is made in such a way that the lining of india-rubber, or the like, is capable of entirely enveloping the tobacco and so that there is a space between the lining and the outer part which constitutes a receptacle distinct from that which contains the tobacco, or the like, and adapted to contain articles such for instance as cigarette papers.

According to my invention the india-rubber, or like, lining is sewn, or otherwise connected, to the outer part along one side only, leaving the other sides of the lining and outer part unconnected, so that the flap with which the lining is provided can be turned over the opening of

the lining within which the tobacco, or the like, is placed and into the space which exists between the lining and outer part at the side opposite that where the outer part and lining are connected together. It is generally preferred to connect the outer part and lining together along the edge of the outer part opposite that at which the flap of the outer part is situated so that the flap of the lining is turned over towards the flap of the outer part to enclose the tobacco, or the like, within the lining and leave a space, or extra pocket, between the flap side of the outer part and the opposed side of the lining for the reception of other articles; such, for example, as cigarette papers, the whole being then enclosed by turning the flap of the outer part over the said space, or extra pocket and the closed lining containing the tobacco, or the like, and securing the said flap by snap, or other suitable fastenings.

Dated this 3rd day of May, 1921.

COMPLETE SPECIFICATION.

Improvements in Pouches for Containing Tobacco, or the like.

I, HARRY SMALLWOOD, a British subject, of 30, Girdler's Road, Brook Green, in the County of London, do hereby declare the nature of this invention and in what manner the same is to be performed, to be particularly described and

[Price 1/-]

ascertained in and by the following statement:—

My invention has for its object to provide an improved pouch for containing tobacco, or the like, the said pouch being of the kind in which an outer portion of

strong material, such, for example, as leather, is lined with a material practically impervious to moisture and air: such, for instance, as india-rubber.

5 The pouch according to my invention is made in such a way that the lining of india-rubber, or the like, is capable of entirely enveloping the tobacco and so that there is a space between the lining
10 and the outer part which constitutes a receptacle distinct from that which contains the tobacco, or the like, and adapted to contain articles such for instance as cigarette papers.

15 According to my invention the india-rubber, or like, inner part, or lining, is sewn, or otherwise connected, to the outer part along one side only; leaving the other sides of the inner part, or lining, and
20 outer part unconnected, so that the flap with which the inner part, or lining is provided can be turned over the opening of the inner part, or lining, within which the tobacco, or the like, is placed and into
25 the space which exists between the inner part, or lining, and outer part at the side opposite that where the outer part and inner part, or lining, are connected together.

30 In the accompanying drawing I have shewn a pouch illustrating what I consider the best way of carrying this invention into effect. Figure 1 shews in perspective, the pouch with the outer flap
35 open and the inner flap partly open. Figures 2, 3 and 4 are transverse sections shewing in Figure 2 the outer and inner flaps open, in Figure 3 the outer flap open and the inner flap closed and in Figure
40 4 both flaps closed.

45 The outer part A and the inner part or lining B are connected together at c (for example, by stitching as illustrated) along the edge a of the outer part A opposite that at which the flap A² of the outer part is situated so that the flap B² of the

inner part or lining B, is turned over towards the flap A² of the outer part A to enclose the tobacco, or the like, within the lining (in the space marked d) and
50 leave a space, or extra pocket, (marked e) between the flap side of the outer part A and the opposed side of the inner part, or lining, B for the reception of other articles, such for example, as cigarette
55 papers, the whole being then enclosed by turning the flap A² of the outer part A over the said space, or extra pocket e and the closed inner part, or lining B containing the tobacco, or the like. The said
60 flap A² may be secured by snap fastenings a³ or other suitable securing means.

Having now particularly described and ascertained the nature of my said invention and in what manner the same is to
65 be performed, I declare that what I claim is:—

1. A pouch for containing tobacco, or the like, the said pouch having an inner part, or lining capable of entirely enveloping the tobacco, or the like, the said inner
70 part, or lining, being secured to the outer part along one side a flap portion of the inner part, or lining, being capable of being turned over to close the space
75 within the inner part, or lining, and leave another space between the inner part, or lining, and the outer part which space can be closed by the flap of the outer
80 part.

2. A pouch made in accordance with the preceding claiming clause, as hereinbefore described and illustrated in the accompanying drawing.

Dated this 22nd day of October, 1921. 85
